PAMM INVESTOR INFORMATION PACK

SECTION / 02

INTRODUCTION

Welcome to LTG PAMM Investment Management

This document has been created to explain how our PAMM investment structure works, how investor capital is managed, what risks are involved and what the process looks like from initial registration through to ongoing investment.

Our approach is built around structured trading, capital protection, disciplined risk management and long-term consistency.

We believe investors should understand exactly how their capital is being managed before making an investment decision.

We offer two different PAMM investment options, allowing investors to select the structure that best aligns with their investment objectives and preferences.

Both options operate using the same underlying trading strategy and risk management philosophy. The primary difference is the volume of trading opportunities pursued and the minimum capital requirements.

We have also introduced a compulsory initial investment phase called Walk Before You Run.

This allows investors to experience the structure, monitor the trading activity and understand the process before considering a larger allocation.

Our objective is to establish investment relationships built around transparency, realistic expectations and an understanding of the risks involved.

SECTION / 03

TRADING INFRASTRUCTURE & BROKERAGE PARTNERSHIP

Why We Partner With Moneta Markets

At Limitless Trading Group, we recognise that professional investment managen
infrastructure, efficient market execution, competitive trading conditions and robust operational systems.

Our partnership with Moneta Markets provides the trading infrastructure supporting our PAMM investment management operations.

INSTITUTIONAL-GRADE MARKET EXECUTION

- Access to global financial markets through professional brokerage infrastructure.
- Trade orders can be processed within milliseconds, depending on execution conditions.
- Fast execution technology designed to minimise unnecessary order delays.
- Infrastructure supporting efficient trade entries, position management and exits.
- Execution capabilities designed to accommodate changing market conditions and volatility.

REGULATION & BROKERAGE OVERSIGHT

- Brokerage services provided through entities operating under their applicable regulatory frameworks.
- Established account registration and identity verification procedures.
- Broker-administered trading accounts and investment allocation infrastructure.
- Regulatory protections and obligations depend on the specific brokerage entity and account agreement.

COMPETITIVE TRADING CONDITIONS

- Competitive spreads and trading costs.
- Access to market liquidity.
- Efficient order execution and processing.
- Professional trading platforms and software.
- Access to multiple financial markets and instruments.
- Account reporting and performance monitoring facilities.

TECHNOLOGY & OPERATIONAL RELIABILITY

- Professional brokerage technology supporting trading operations.
- Trading platforms designed for order execution and account management.
- Infrastructure supporting the management of multiple positions.
- Account-monitoring and reporting capabilities.
- Operational systems supporting the PAMM investment structure.

ACCOUNT EQUITY PROTECTION

An additional component of our operational framework is account-level equity-protection functionality, where supported and enabled. Key features and objectives include:

- Monitoring account equity against predefined protection thresholds.
- Supporting automated protective actions when configured conditions are triggered.
- Helping reduce exposure to certain operational and technical disruptions.
- Providing an additional safeguard during internet connectivity failures or trading terminal interruptions.
- Supporting account risk controls when manual intervention may be unavailable.

Important: Equity-protection functionality is subject to system configuration, connectivity, execution availability and the applicable broker terms. It cannot guarantee protection against capital losses, market volatility, slippage or all technical failures.

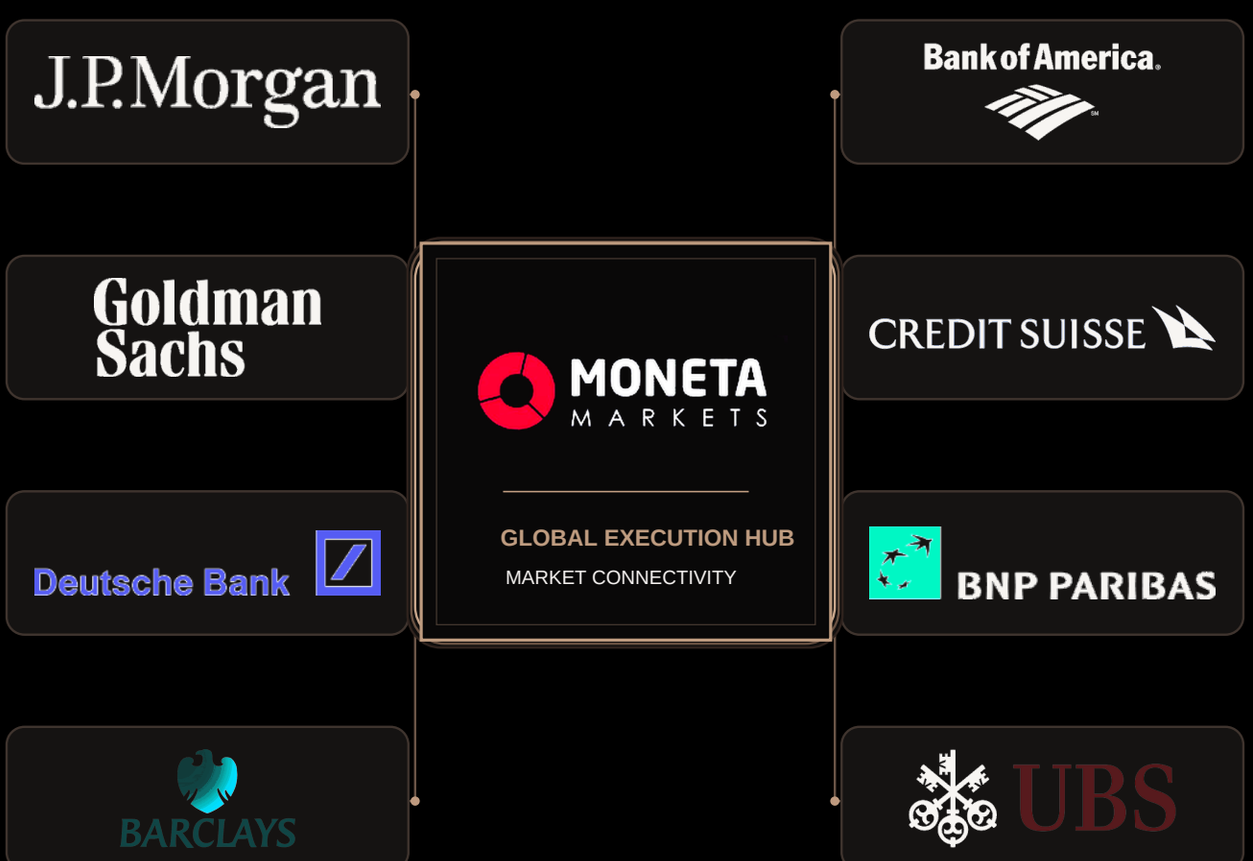

WHY THIS MATTERS TO INVESTORS

- Professional brokerage infrastructure supporting LTG trading operations.
- Fast market execution and competitive trading conditions.
- Reliable software and account-management capabilities.
- Structured account monitoring and operational safeguards.
- Separation between brokerage infrastructure and LTG trading management responsibilities.

Our objective is to combine disciplined trading management with professional brokerage infrastructure to support efficient execution, operational reliability and responsible capital management.

GLOBAL EXECUTION NETWORK

Institutional market infrastructure / conceptual overview

GLOBAL MARKET CONNECTIVITY

Professional execution technology and access to liquidity are important elements of our brokerage infrastructure.

Conceptual diagram adapted from the supplied Moneta Markets brochure. The displayed institution logos do not independently establish direct contractual liquidity-provider relationships.

DAVID BILY

FOUNDER & CEO / MONETA MARKETS

BROKERAGE LEADERSHIP

David Bily is the founder and CEO of Moneta Markets, bringing extensive experience across global financial services, brokerage operations and business development.

His background includes senior leadership roles in the trading industry, with a focus on market access, technology, client experience and sustainable brokerage growth.

For LTG, understanding the people and principles behind the infrastructure matters as much as understanding the trading platform itself.

TRUST. ALIGNMENT. LONGEVITY.

Trust and relationships are central to the way LTG approaches the trading industry. Direct relationships with brokerage leadership create opportunities for clearer communication, accountability and a deeper understanding of how the business operates.

Our aim is to remain a valuable long-term partner to the broker while putting client interests, responsible risk management and transparent expectations at the centre of every decision.

Long-term infrastructure is built through mutual value, consistent standards and relationships that endure beyond individual market cycles.

RELATIONSHIPS BUILT ON TRUST. INFRASTRUCTURE BUILT FOR THE LONG TERM.

SECTION / 04

WHAT IS A PAMM ACCOUNT?

Understanding PAMM Investment Management

PAMM stands for Percentage Allocation Management Module.

It is an investment structure that allows multiple investors to participate in one professionally managed trading account.

Rather than every investor having to trade independently, a fund manager executes trades within the managed account.

Each investor participates in the account according to their percentage allocation of the total investment pool.

HOW IT WORKS

1. Investors open and fund their individual investment allocations.
2. Their capital is allocated through the managed PAMM account.
3. The fund manager executes trades.
4. Trading profits and losses are distributed proportionally.
5. Investors monitor their investment through the available broker reporting facilities.

The investor does not need to analyse markets, execute trades or manage positions themselves. The fund manager is responsible for trading decisions within the agreed mandate.

ILLUSTRATIVE ALLOCATION EXAMPLE

Assume the total PAMM investment pool is $3,100,000.

Investor	Investment	Allocation
Investor A	$100,000	3.23%
Investor B	$500,000	16.13%
Investor C	$2,500,000	80.64%
TOTAL	$3,100,000	100%

If the account generates $5,000 in eligible net trading profit before the performance fee:

Investor	Profit Allocation
Investor A	$161.29
Investor B	$806.45
Investor C	$4,032.26
TOTAL	$5,000.00

Losses are also allocated proportionally. All figures are illustrative and exclude applicable management and performance fees.

SECTION / 05

THE MANAGEMENT STRUCTURE

Who Manages the Account?

The PAMM account is managed by the appointed fund manager through the relevant Moneta Markets account structure.

FUND MANAGER RESPONSIBILITIES

- Market analysis and trade selection.
- Entry and exit decisions.
- Position sizing and exposure.
- Portfolio management.
- Risk monitoring.
- Trading execution.
- Monitoring overall account performance.

Moneta Markets provides the brokerage infrastructure through which the relevant trading and account allocation arrangements operate.

LTG provides the trading management approach and investor relationship.

MARKETS MONITORED

The trading approach may involve selected financial instruments, including:

- Gold (XAUUSD).
- Silver (XAGUSD).
- Major foreign exchange pairs.
- Selected commodities.
- Other approved instruments where appropriate.

The instruments traded may change according to market conditions, strategy requirements and the account mandate.

SECTION / 06

UNDERSTANDING THE TWO PAMM OPTIONS

Two Investment Options. One Underlying Trading Strategy.

We offer two different PAMM investment options. Both options use the same underlying trading strategy and risk management philosophy. The distinction is the trading activity and opportunity selection.

OPTION 1 — LOW RISK / USD $100,000

This option follows our lower-risk trading approach, prioritising selective trade opportunities and disciplined execution.

- Minimum initial deposit of $100,000.
- Initial deposit is fixed at $100,000.
- Subsequent deposits of $20,000 or more.
- Selective trading opportunities.
- Same underlying strategy and risk management framework.
- Focus on disciplined execution and controlled exposure.

This option is designed for investors who prefer the lower-volume approach.

OPTION 2 — HIGH VOLUME / USD $50,000

The High Volume option uses the same underlying trading strategy and risk management philosophy. The difference is that we identify and execute a greater number of trading opportunities.

It is not designed around taking greater risk or simply increasing position sizes. Instead, the approach involves finding and participating in more opportunities within the same trading framework.

- Minimum initial deposit of $50,000.
- Subsequent deposits of $5,000 or more.
- Greater trading opportunity frequency.
- Same underlying strategy.
- Same risk management philosophy.
- Focus on identifying and executing additional market opportunities.

Important: High Volume does not mean higher risk by design. However, increased trading frequency can create additional cumulative transaction costs and exposure. Actual risk depends on position sizing, simultaneous positions, holding periods and overall account exposure.

INVESTMENT OPTION COMPARISON

Feature	Low Risk	High Volume
Minimum initial deposit	$100,000	$50,000
Initial deposit	Fixed $100,000	$50,000 minimum
Subsequent top-ups	$20,000+	$5,000+
Trading strategy	Same core	Same core
Trading frequency	More selective	More opportunities
Risk philosophy	Controlled	Controlled
Performance fee	30%	30%
Investor profit share	70%	70%
Management fee	$100	$100

The two options are not a guarantee of different performance outcomes. Neither option guarantees profits or eliminates the possibility of loss.

DIVERSIFIED HYBRID

Investors may choose a single PAMM option or allocate capital across both Low Risk and High Volume strategies through a diversified hybrid approach, subject to the relevant account terms and eligibility.

LOW RISK

More selective trading frequency

HIGH VOLUME

Additional opportunities within the same core strategy

HOW HYBRID ALLOCATION WORKS

- Capital may be split between both approaches based on investor preference.
- Each allocation retains its respective minimums, fees and account terms.
- Diversification does not guarantee reduced losses or positive performance.

MONTHLY PROFIT ALLOCATION

Eligible realised profits are shared monthly, subject to the high-water mark and agreement.

OWNERSHIP, ACCESS AND CONTROL

How your PAMM investment is held, monitored and managed

01 OWNERSHIP AND MANAGEMENT

Your capital is recorded as an individual investor allocation under the applicable Moneta Markets PAMM arrangements. LTG directs trading activity under the agreed mandate; managing trades does not transfer personal ownership of your allocation to the manager.

02 ALLOCATION RECORDS AND REPORTING

Your broker/PAMM records show your investment allocation and the account reporting made available to you. You can review your allocation, account performance and applicable transaction history through the access provided by the broker. The precise portal, reporting frequency and statement format are set out in the account documents.

03 HOW PROFITS AND LOSSES ARE ALLOCATED

Trading results are attributed to investors according to their applicable share of the PAMM pool, adjusted for capital movements and the broker's calculation rules. Eligible profits are subject to the 70% investor / 30% manager monthly profit-share arrangement and the high-water mark. The separate USD $100 management fee also applies as specified in the fee schedule.

04 DEPOSITS AND ADDITIONAL CAPITAL

Investors fund their allocation using the broker's approved payment methods. Low Risk begins with a fixed USD $100,000 allocation; High Volume begins at USD $50,000 or more. After the compulsory Walk Before You Run phase, additional deposits start at USD $20,000 for Low Risk or USD $5,000 for High Volume. Hybrid allocations are subject to the requirements of each component.

05 WITHDRAWALS AND EXITING

An investor may submit a withdrawal or exit request using the process specified in the PAMM agreement. The amount available depends on account equity, open positions, fees and any contractual restrictions. Processing dates, notice periods and the handling of open trades must be confirmed in the broker's applicable terms; immediate access to all capital is not promised.

06 DECISION-MAKING AND RISK CONTROL

LTG is responsible for trade selection, position management and risk assessment within the mandate. The strategy may remain inactive when conditions are unsuitable. Equity-protection controls are additional safeguards, not a guarantee against losses or operational failures.

ACCOUNT TERMS

Broker and PAMM agreements govern exact rights, processing times and reporting access.

LTG
LIMITLESS

SECTION / 08

MINIMUM INVESTMENT AND CAPITAL REQUIREMENTS

Choosing Your Initial Investment

Investors can select between two investment options depending on their available capital and preferred trading structure.

LOW RISK PAMM

Investment Detail	Requirement
Initial deposit	$100,000
Minimum initial deposit	$100,000
Maximum initial deposit	$100,000
Subsequent top-up	$20,000 minimum
Account currency	USD

The initial allocation is $100,000. Once the initial investment phase has been completed, additional deposits can be made in increments of $20,000 or more.

HIGH VOLUME PAMM

Investment Detail	Requirement
Initial deposit	$50,000 minimum
Account currency	USD
Subsequent top-up	$5,000 minimum

Following completion of the initial investment phase, investors can add further capital in increments of $5,000 or more.

ADDITIONAL INFORMATION

- All deposits must follow the broker's approved funding procedures.
- Additional deposits are subject to the applicable PAMM account arrangements.
- The compulsory Walk Before You Run phase applies to all investors.

- There is no obligation to increase an investment after the initial phase.
- Withdrawals are subject to the applicable broker and PAMM account terms.

SECTION / 09

UNDERSTANDING INVESTMENT RISK

Every Investment Carries Risk

The financial markets provide opportunities, but they also carry the possibility of loss.

This investment involves trading financial instruments, potentially including leveraged products. These instruments can experience rapid price movements and substantial volatility.

Investors must be financially capable of accepting the possibility of losing some or all of their invested capital.

IMPORTANT RISKS

1. Market Risk
Prices can move against positions due to economic developments, central bank decisions, geopolitical events and changing market conditions.

2. Drawdown Risk
The account may experience periods where its equity declines from a previous high. These periods are known as drawdowns.

3. Leverage Risk
Leverage can increase both potential gains and potential losses. A relatively small market movement can have a significant impact on account equity.

4. Execution Risk
Spreads, slippage, liquidity conditions and execution delays can affect trading outcomes.

5. Strategy Risk
No trading strategy works in every market condition. Periods of underperformance and losses are possible.

6. Broker and Operational Risk
Investors are also exposed to relevant counterparty, platform, technology and operational risks associated with the broker and account structure.

UNDERSTANDING KEY TERMS

Term	Explanation
Profit	Positive trading performance
Drawdown	Decline from a previous equity peak
Floating loss	Loss on currently open positions
Recovery	Improvement following a drawdown
Maximum drawdown	Largest decline over a period
Equity	Balance plus floating P/L

OUR APPROACH TO RISK

- Structured position sizing.
- Controlled market exposure.
- Selective trade execution.
- Monitoring of account equity.
- Awareness of market volatility.
- Avoiding unnecessary overexposure.

Both PAMM options operate under the same underlying trading strategy and risk management philosophy. The High Volume option seeks more trading opportunities. This does not mean that losses are impossible or that trading frequency has no effect on cumulative exposure.

Risk management is intended to control and manage exposure. It cannot eliminate the possibility of losses.

SECTION / 10

POTENTIAL RETURNS AND PERFORMANCE

Understanding Performance

The objective of the managed account is to generate positive trading performance over time through a structured trading approach.

However, performance is variable and cannot be predicted or guaranteed.

Actual results depend on market conditions, trading opportunities, account exposure, execution and risk management.

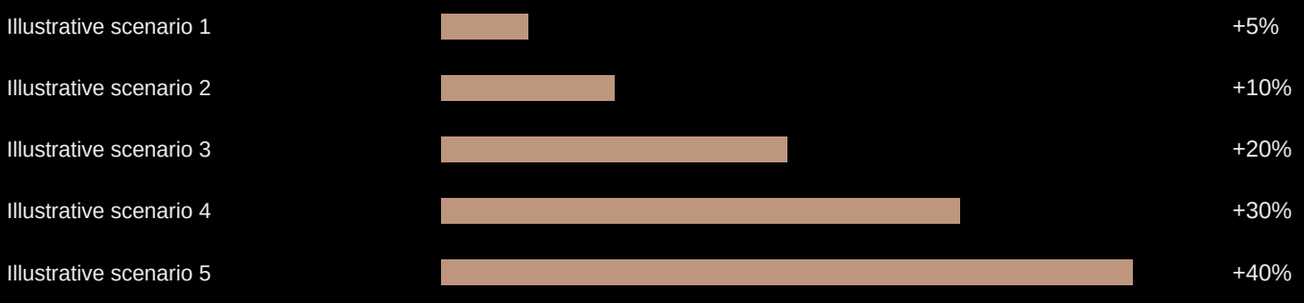

Investors should assess performance over a meaningful period rather than focusing on individual winning days or short-term results.

ILLUSTRATIVE INVESTMENT EXAMPLES

The following examples demonstrate how different monthly account outcomes would affect a hypothetical $500,000 investment.

Monthly Performance	Profit on $500,000
+5%	+$25,000
+10%	+$50,000
+20%	+$100,000
+30%	+$150,000
+40%	+$200,000

ILLUSTRATIVE MONTHLY PERFORMANCE

These figures are mathematical illustrations only. They are not expected returns, performance targets or forecasts. They exclude applicable management fees, performance fees, broker charges, deposits, withdrawals and other adjustments.

ILLUSTRATIVE MONTHLY PERFORMANCE ONLY

Examples are hypothetical and do not represent actual or expected returns.

Any monthly profit allocation depends on realised eligible profits, fees and terms.

SECTION / 11

WALK BEFORE YOU RUN

Our Compulsory Initial Investment Phase

We believe investors should experience the investment structure before committing additional capital.

For this reason, every investor is required to complete our initial Walk Before You Run phase.

The purpose is to provide a controlled starting point where investors can observe the account, understand how it operates and assess their own comfort with the investment.

STAGE 1 — START SMALL

- Begin with the applicable initial investment.
- Maintain the agreed initial allocation.
- Complete the compulsory [X]-day period.
- Monitor trading activity and account performance.
- Become familiar with the broker and reporting facilities.

Additional capital cannot be allocated during this compulsory period, subject to the agreed programme rules. For the Low Risk option, the starting allocation is $100,000. For the High Volume option, the starting allocation is at least $50,000.

STAGE 2 — REVIEW THE EXPERIENCE

- Overall trading performance.
- Account fluctuations.
- Drawdowns experienced.
- Trading approach and frequency.
- Communication and reporting.
- Personal comfort with the level of risk.

STAGE 3 — DECIDE WHETHER TO SCALE

- Maintain their existing investment.
- Increase their allocation.
- Make no further investment.
- Withdraw according to applicable account terms.

Additional investment minimums remain: Low Risk: $20,000 or more. High Volume: $5,000 or more. There is no obligation to increase capital.

OUR PHILOSOPHY

Experience first. Understand the process. Then decide whether to commit more.

The purpose is not to suggest that a short period proves the safety or future profitability of the investment. It simply gives investors an opportunity to become familiar with the structure before considering a larger commitment.

SECTION / 12

MANAGEMENT FEES AND PROFIT SHARE

How the Manager Is Compensated

The investment structure includes two separate fee components: 1. A fixed management fee of USD $100. 2. A performance-based profit share of 30%, subject to the high-water mark. The fixed management fee and performance-based profit share are separate charges.

70/30 PROFIT SHARE STRUCTURE

Recipient	Profit Share
Investor	70%
Fund Manager	30%
TOTAL	100%

The investor retains 70% of eligible profits, while the fund manager receives 30% as the performance-based management share. This arrangement applies to both the Low Risk and High Volume options.

UNDERSTANDING THE HIGH-WATER MARK

The high-water mark is designed to ensure that performance fees are not repeatedly charged on the same recovered profits. It means that after a period of losses, the account must recover those losses and exceed its previous applicable high-water mark before another performance-based profit share becomes payable.

ILLUSTRATIVE EXAMPLE

Assume an investor has an account value of $100,000. The account subsequently generates $10,000 in eligible net trading profit.

Item	Amount
Starting investment	$100,000
Eligible net profit	$10,000
Investor share — 70%	$7,000
Manager share — 30%	$3,000
Account after allocation	$107,000

The $100 fixed management fee is separate and is not included in this example.

HIGH-WATER MARK & REPEATED FEES

1. The account starts at $100,000.
2. It increases to $110,000.
3. Eligible profit is allocated 70/30.
4. The account subsequently experiences a loss.
5. The account must recover to the applicable previous high-water mark before another performance share is charged on new profits.

The exact high-water mark calculation must account for performance allocations, fees, deposits, withdrawals and the broker's contractual methodology.

FIXED MANAGEMENT FEE

Investment Option	Fixed Management Fee
Low Risk	$100
High Volume	$100

The fee charging frequency, collection method and applicable account treatment will be confirmed in the PAMM agreement and fee schedule.

MONTHLY PROFIT SHARE & DISTRIBUTIONS

Eligible realised profits are allocated on a monthly basis, subject to the high-water mark, broker procedures and contractual distribution schedule.

SECTION / 13

INVESTOR ONBOARDING

Your Investment Journey

We aim to make the onboarding process clear and straightforward.

01 — INITIAL CONVERSATION

Discuss the investment structure, trading approach, risk, minimum capital and expectations.

02 — INVESTMENT OPTION SELECTION

Choose between Low Risk — $100,000 initial investment and High Volume — $50,000 minimum initial investment.

03 — INVESTOR SUITABILITY

Establish whether the investment is appropriate for your financial circumstances, objectives and tolerance for loss.

04 — BROKER REGISTRATION

Register with Moneta Markets and complete the required identity verification and compliance checks.

05 — PAMM ACCOUNT SETUP

Complete the necessary account documentation and allocation arrangements.

06 — INITIAL DEPOSIT

Fund the account using an approved broker funding method.

07 — WALK BEFORE YOU RUN

Complete the compulsory initial investment period.

08 — REVIEW AND ONGOING INVESTMENT

Review the experience and decide whether to maintain or increase your allocation.

SECTION / 14

FREQUENTLY ASKED QUESTIONS

Investor Reference

Do I need trading experience?

No. Investors do not need to execute trades or analyse the markets themselves. However, they must understand the investment risks before participating.

What is the difference between the two PAMM options?

Both options use the same underlying trading strategy and risk management philosophy. The Low Risk option follows a more selective trading approach, while the High Volume option seeks and executes more trading opportunities. High Volume does not mean that the strategy is designed to take higher risk.

What is the minimum investment?

The Low Risk option requires an initial investment of $100,000. The High Volume option requires a minimum initial investment of $50,000.

Can I add more capital?

Yes, after completing the compulsory initial investment phase. Low Risk: additional deposits of $20,000 or more. High Volume: additional deposits of $5,000 or more.

How and when is the profit shared?

Eligible profits are allocated monthly: 70% investor / 30% manager, subject to the high-water mark, account terms and availability of realised profits.

Is there a management fee?

Yes. Both investment options have a separate $100 fixed management fee.

Are returns guaranteed?

No. There are no guaranteed returns. Trading involves risk and losses are possible.

How does LTG seek to protect investor capital?

We prioritise selective trades, controlled exposure and sitting out unsuitable markets. Equity safeguards reduce certain risks but cannot eliminate the possibility of loss.

Can I monitor my investment?

Investors can monitor their allocation and performance through the reporting and account access facilities provided under the broker's PAMM arrangement.

Can I withdraw my capital?

Withdrawals are subject to the broker's PAMM arrangements, account terms, processing procedures and applicable allocation restrictions.

What happens during a drawdown?

The account may experience periods of declining equity. Recovery is not guaranteed.

Can I stop investing?

Investors may request to exit subject to the account agreement and applicable broker withdrawal procedures.

OUR CAPITAL PROTECTION PHILOSOPHY

Disciplined decisions. Suitable conditions. Long-term thinking.

WHY WE DO NOT NEED TO TRADE EVERY DAY

Our objective is not to rush into trades or chase short-term returns.

Capital preservation begins with deciding whether conditions justify risk.

When the market does not meet our criteria, we can remain on the sidelines.

THE DECISION FRAMEWORK

01 MARKET ANALYSIS

Assess trend, liquidity, volatility and cross-market conditions.

02 RISK ASSESSMENT

Evaluate exposure, account equity and the suitability of new positions.

03 EQUITY PROTECTION

Use configured monitoring and protection tools as operational safeguards.

04 EXECUTE OR WAIT

Trade only when criteria align; otherwise preserve flexibility and capital.

WHEN WE PREFER TO SIT OUT

Major economic announcements and unpredictable news headlines.

Unusually high volatility, poor liquidity or unstable execution conditions.

Conflicting market signals or setups that do not meet our requirements.

IMPORTANT DISTINCTION

These controls are designed to manage risk, not eliminate it. Extreme price gaps, leverage, technical failures and other events can still cause substantial or total loss.

SECTION / 15

FINAL THOUGHTS AND INVESTMENT DISCLOSURE

An Investment Built Around Understanding and Discipline

At LTG, we believe that a successful investment relationship starts with transparency and realistic expectations.

Our objective is to manage trading activity through a structured approach, with an emphasis on disciplined execution, risk awareness and long-term consistency.

We encourage every investor to understand the structure, evaluate the risks and make decisions based on their own financial circumstances.

The Walk Before You Run phase reflects this philosophy: experience the investment first, understand how it operates, and only then decide whether additional capital is appropriate.

OUR INVESTMENT STRUCTURE

Programme / Term	Details
LOW RISK PAMM	$100,000 initial / $20,000+ top-ups
HIGH VOLUME PAMM	$50,000 initial / $5,000+ top-ups
PROFIT SHARE	70% Investor / 30% Manager
HIGH-WATER MARK	Applies to performance share
FIXED MANAGEMENT FEE	USD $100 for either option

LIMITLESS TRADING GROUP — Professional trading management. Structured investment participation. Transparent expectations.

IMPORTANT INVESTMENT DISCLOSURE

This document is provided for general informational purposes and does not constitute personal financial advice, an offer, or a guarantee of investment performance.

Trading financial instruments, including leveraged products, carries substantial risk. Investors may lose some or all of their invested capital.

Past performance is not indicative of future results. No representation is made that any particular return, profit or level of performance will be achieved.

The terms Low Risk and High Volume describe the intended investment approaches and do not guarantee a particular level of risk or return.

Increased trading frequency can create additional cumulative transaction costs and exposure.

All investment participation is subject to the applicable Moneta Markets account documentation, PAMM agreement, broker terms and relevant legal and regulatory requirements.

The investor must independently consider the suitability of the investment for their financial circumstances and seek independent professional advice where appropriate.

The actual contractual arrangements take precedence over any simplified examples or explanations in this document.
